---

ABOUT

Hey!

If you are here it mean you purchased my asset and I feel honored thank you so much !

However before using this character you will need to follow some guideline. It will be short I promise ^^.

Let's start below !

**Mia Locklace -**

**Minimum Unity Ver. 2019.1**

# HOW TO USE

---

STEP	Follow
1	After importing the asset into your Unity project open the zip file «SSS-plugin unity.zip»
2	Extract the content into your «assets» folder in your unity project.
3	Reboot your unity project and you can now open «MiaBikini Standalone» in the scene folder !

This asset is Game Ready so you don't need to do anything more for setup this character !

However you still can change any parameters in the SSS Shaders if her tone skin is not in your taste ^^

I'm new on Unity so if you think you find a better setting than me for the SSS Skin Shader please mail me and if I confirm your great skills I can refund you this purchase and upload your work as a next update with your name !

Thanks :)
